

Next 3 Years Opportunities & Tonnage development

Possibilities

- New designs
- Better technologies for energy storing

Solutions

- Implementation, optimal use
- Minimizing energy consumption
- Exhaust gas energy recovery vs. Flettner rotors
- Flexibility: Electric propulsion, modular thinking, exchangeable units for generating electricity
- Low speed, which will lead to a need for more tonnage

Challenges

- Rapid technological development
- What will be the dominant technology
- One example: Hydrogen or batteries? (or biofuels?)
