

FERRY SHIPPING SUMMIT 2023

How automation and self-service can optimize the onboarding service for ferry ROPAX operators

Lars Clausen
Founder & CCO

Logos in brief

- Focused on self-service payment- and automation solutions and platforms with a special focus on mobility
- We are system integrators with own solutions for e.g. kiosks, card payment, mobile payment, kiosk applications, gate control systems and backend solutions.
- Agile development organization of app. 60 software engineers for co-creations, customizations, interfacing, adaptations etc.
- We partner with our clients to support them in their digital transformation journey
- App 170 employees

Why automation and self-service?

It is about better customer experience, more safety and higher profitability

Why automation and self-service?

- Better and more intuitive customer journey
- Faster check-in - Expect an average of a factor 2-3 improvement of gate flows (check-in time)
- Create logic up-sales possibilities at the kiosks
- Efficient handling of high-season peaks w. less need for temp. staff etc.
- Increased safety and security
 - *People counting, vehicle type identification (e.g., EV) etc.*
- Provides correct classification = correct ticketing = increased profitability
- Fewer manual processes = reduced operating costs
- Focus manual processes for customers on deviations and exemption handling
- Improved overall port flows and reduced congestion in port area
- Reduce or eliminate cash handling

What can be automated?

- Identification of vehicles
 - *License plate recognition (linked to bookings, track and trace of freight vehicles, commuters etc.)*
 - *Vehicle type identification (make & model)*
- Classification of vehicles for correct ticketing
- Photo documentation for damage claims management.
- Weight and dimensions of vehicles for cargo planning
- Counting of vehicles boarding/leaving
- Counting of persons boarding/leaving
 - *Walking passengers*
 - *(Driving passengers)*
- Track and trace of freight vehicles
- Verification of passports & ID cards
- OCR reading for e.g. verification of haz. labels etc.
- And others, as there is a continuous development in automation solutions

What to use self-service for?

- User dialogue at check-in gate
- Deviation management
- Booking identification
- Ticket sales
- Up-sale
- Payment
- Persons Identification
- Document handling

Examples of Installations

Cars & Vans

Installation in existing structure

New structure designed for self-service

Combination of Vans & Trucks

Foot passengers

Introducing the new ACINA generation

- 22” Outdoor Touch Screen
- Full HD graphics
- Customizable user flow w. support for HTML
- Powerful embedded Linux platform
- All Stainless Steel
- Modules for
 - *Contactless Payment (EMV & Mifare)*
 - *QR and Barcode Scanner*
 - *Document Printing*
 - *Intercom*
 - *Camera*

Where to start and how to implement?

We divide a delivery into 3 phases:

1. Clarification & Scoping phase
2. Design & Specification phase
3. Customization & Implementation phase

**All ferries, routes and ports
are individual.**

“

**Please speak with us
to discuss how to
optimize your
onboarding service**
